

1 生成最新太古城水质数据的代码执行过程

1.1 获取旧数据太古城最大的接受时间

```
1 select max(region_receiving_date) region_receiving_date from  
   coss_tmp.dm_cus_water_quality_wo_details_mini_arch260707
```

1.2 获取当前时间与就数据的时间间隔

把上一步的执行结果region_receiving_date 作为参数输入这个步骤

```
1 select cast(extract(epoch from (now() - timestamp  
   '${region_receiving_date}')) / 86400 as int) as days_diff;
```

1.3 更新太古城水质事故数据的最新时间

把上一步的执行结果days_diff 作为参数输入这个步骤

```
1 delete from coss_dm.dm_cus_water_quality_wo_details_mini dcwqwdm  
2 where ordernum = '251115J3R7B' or relateorder = '251115J3R7B';  
3 insert into coss_dm.dm_cus_water_quality_wo_details_mini  
4 select  
5     ordernum,  
6     region_abbr,  
7     admin_division_code,  
8     cpt_type_code,  
9     urgency_code,  
10    water_type_code,  
11    wo_status_code,  
12    org_type_code,  
13    wq_cpt_type_code,  
14    dma_code,  
15    street,  
16    estate,  
17    term,  
18    village,  
19    affect_building_code,  
20    building_tc,  
21    building_en,  
22    floor,  
23    isrepeatedcomplaint,  
24    relateorder,  
25    service_content,  
26    post,  
27    functionary,  
28    phone,  
29    coordinate_x,  
30    coordinate_y,  
31    region_receiving_date + interval '${228} day',  
32    create_time + interval '${228} day',
```

```
33     finishtime + interval '${228} day',
34     current_timestamp dm_update_time,
35     current_timestamp dm_load_time
36 from coss_tmp.dm_cus_water_quality_wo_details_mini_arch260707
```
